

Michael Friel

Site Reliability Engineer, Backend & Automation

Oxnard, CA mike.p.friel@gmail.com 412-302-6647 linkedin.com/in/mike-friel-25407898

Site reliability engineer with 5+ years building and automating production systems in Python, C#/.NET, and SQL Server on Azure. Builds and deploys 20+ services and monitors 400+ for a court e-filing platform trusted by 20,000+ law firms, sustained at 99.95% uptime against midnight filing deadlines.

Experience

Lead Site Reliability Engineer · One Legal (InfoTrack) 2024 – Present

- Build and deploy 20+ applications and monitor 400+ services for an e-filing platform trusted by 20,000+ law firms to file and serve 1M+ cases a year across California, Texas, Illinois, and New York
- Lead the on-call rotation and after-hours coverage for a platform held to 99.95% uptime SLAs
- Own postmortems and mentor Production Support, Client Services, and newly onboarded engineers
- Built monitoring and alerting automation (Python, Azure Functions, runbooks) that cut incident response time from 10 minutes to 2
- Reduced missed-deadline incidents requiring court declarations from 4–5 per week to roughly 1 per quarter
- Built automated reconciliation for outstanding orders and uncollected fees on Azure DevOps with Datadog monitoring, recovering \$250K+ and cutting production failures 72%, contributing to the company's highest-grossing year and first \$1M revenue week
- Automated Azure Container Apps operations (starts, stops, revision recycling) with Azure CLI and PowerShell, using KQL queries as validation gates at each deployment step reducing toil when services fail
- Reduced multiple 3-hour daily Finance reporting processes to an average of 5 minutes with multi-stage calculation layers and SQL Server bulk loading automations
- Lead 700+ production deployments (Octopus Deploy)
- Reduced SQL Server query wait times in Production 60%+ via Database Performance Analyzer (DPA) and targeted indexing
- Develop web applications, internal tools, and REST/SOAP court integrations in C#/.NET and Python.
- Run MCP integration testing for unreleased AI products

Software Engineer · Honeywell Voice 2021 – 2024

- Helped build UPS ePMI, a custom voice system recording 100+ trailer and dolly inspection items; 2023 CIO 100 Award
- Built .NET MAUI apps for Honeywell Voice, a warehouse platform used by 1M+ workers daily; validated its Xamarin migration
- Delivered client-specific builds for enterprise and government customers including Walmart, UPS, FedEx, and PepsiCo
- Built 250+ customer-specific language and dialect localizations for global deployments, including across India
- Built React, React Native, and C#/.NET Core apps on Oracle and SQL Server; provided production support and network troubleshooting on Windows and Linux

Projects

Home Lab · Terraform, GitHub Actions, Docker, FastAPI, Claude Code

- Built a tool that scrapes tide charts and conditions data to find optimal wildlife photography windows for a media studio
- Prototyping a gamified tool that encourages ethical wildlife-viewing distances

Skills

Reliability	On-call leadership, incident response, postmortems, runbooks, KQL, Azure Monitor, Grafana
Cloud & Automation	Azure (Functions, Container Apps, Key Vault, AKS), Azure DevOps, Azure CLI, PowerShell, GitHub Actions, Octopus Deploy, Jenkins, Terraform, Docker
Languages & AI	Python, C#, T-SQL, JavaScript, TypeScript, Bash, Claude Code, MCP
Frameworks & Data	ASP.NET Web API, .NET Core, .NET MAUI, Xamarin, FastAPI, React, React Native, Entity Framework, SQL Server, PostgreSQL, CosmosDB, Oracle
Education	B.A. Political Science, University of Pittsburgh
